Survey Background

- 1.2 **Survey Method and Targets.** The Survey is a telephone interview survey. The target respondents of the Survey are Hong Kong residents aged 21 or above
對象：家香港滿21歲的居民
- Two stages of random sampling were used to ensure the representativeness of the sample. To select a random sample for the telephone survey, the Chinese computer-aided-telephone interviewing (CATI) system automatically generated phone samples from the telephone pool created from the Hong Kong Telephone Directory. The last two digits of the telephone numbers were replaced by two random numbers.
- The second stage of random sampling involved the selection of eligible samples within households. Those eligible household members whose birthdays were the closest from the survey day would be chosen as our respondents. We tried at least three dials to enhance the response rate.
- 1.3 **Data Collection.** Data collection took place in the evenings of September 19 – 25, 2016. The CATI system was employed to collect data. It enabled on-line supervision of the data collection process.
- 2016年9月19日至9月25日隨機抽樣電話訪問
- 1.4 **Completed questionnaires.**
- We successfully interviewed a total of 952 respondents. The response rate is 25.4%.
- 1.5 **Margin of error.**
- The margin of error is estimated to be 3.2%.
